

1a) This shows the count of yes/no outliers for deaths for each state over the years. It worked better to show each year individually. While this pie chart does show the percentage of outliers to non-outliers visually, you don't know which states are the outliers for this variable. This would not be a good chart to use because you can't show the whole picture in one visual that it needs to show.

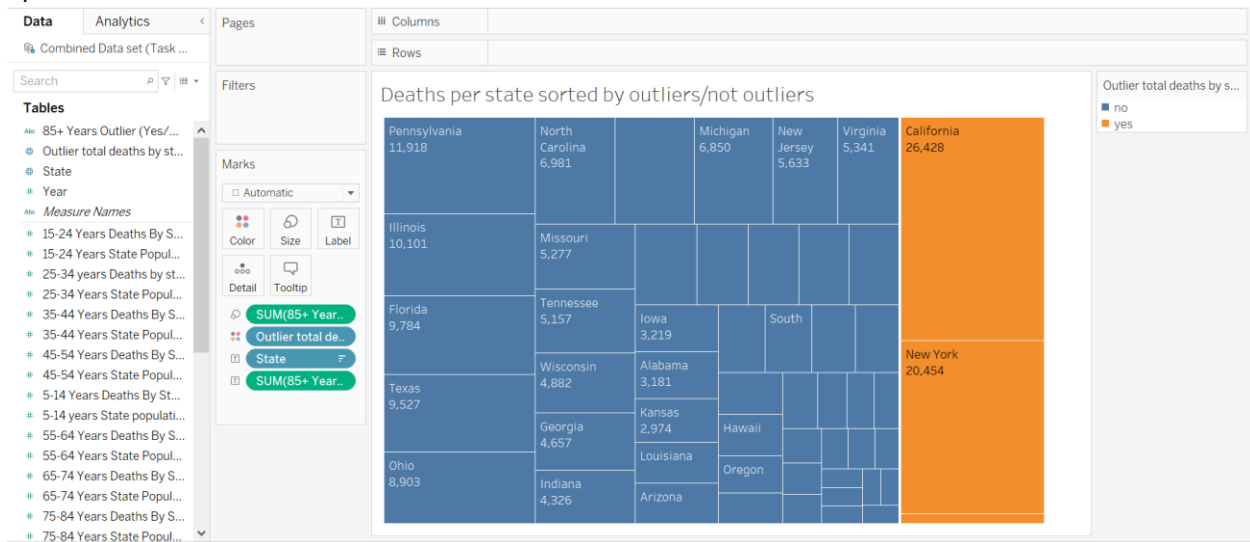

1b)

2) Bar Chart
